REMOTE VIEWING SPECIAL SESSION
(808)

TIME

#01: This is a special session done at 2045 hours on
28 August 1981. No facilitator.

These are random notes concerning target 8107.

PAUSE

I see...team is still traveling on the west side of the
Lime River. The point at which they will want to go to their
right to the wreck site.....most decidedly be up hill....
I....trying to find some form of significant marker to indicate
where that right should be made.... It will occur at a point
where the...mountain Blanco...the larger of the two Blanco
mountains of what I termed earlier as a flat top mountain.....
will be at an azimuth of....just a minute.....
about 278 degrees from...magnetic north....278 degrees from
their position on the river.... So they must proceed along
the river to a point where 278 intersects Blanco mountain.

There's a deep cleft between two hills across the river on
the east side with a tributary or some form of intersecting
water up the river.

Getting an impression of some form of washboard....like a
ripple, washboard ripple type affect ...at that point of
intersection where the river is low....I can't identify
what the perception pertains to....keep getting this washboard.
Undulating movement of some kind...or ripple in one direction.

PAUSE

Something orange.....get an impression of something orange.
Not a lot of it, but it's clearly seen or clearly visible
at the point where they would want to go right in the direction
of travel. It's at the direction of travel of southwest.

Think it will be mid-afternoon perhaps when they find this
...tomorrow, mid-afternoon. It's hard to tell with the
light and the shadow.

PAUSE

The river will narrow a little also where they have to go,
west. That's about all I'm getting. That's all I'm getting.
